

Old scale models sometime become dated because of late changes to designs and in the case of bigger schemes changes in layout and types of building; e.g. houses instead of apartments.

Changes to 3D images are relatively simple but for models can be expensive.

The development for this four year old 1:250 scale model had a complete design change for the existing Blocks 10 and 11.

In 2007 monies would have probably been available to change the layout and add new model pieces.

A solution was to remove the existing blocks and replace with a site plan colour up

It is not an ideal solution but does make the scale model active again as a selling tool

Below is another example of upgrading a scale model.

The challenge here was to build the last phase in the development show in white (bottom left) and add to a model previously built by others

If you have a scale model that needs repairing and or modifying please send email to [chris@wedrawfast.com](mailto:chris@wedrawfast.com) with a brief and new site plan and we will come back to you with a no obligation on your part site visit from us followed by a cost effective solution
